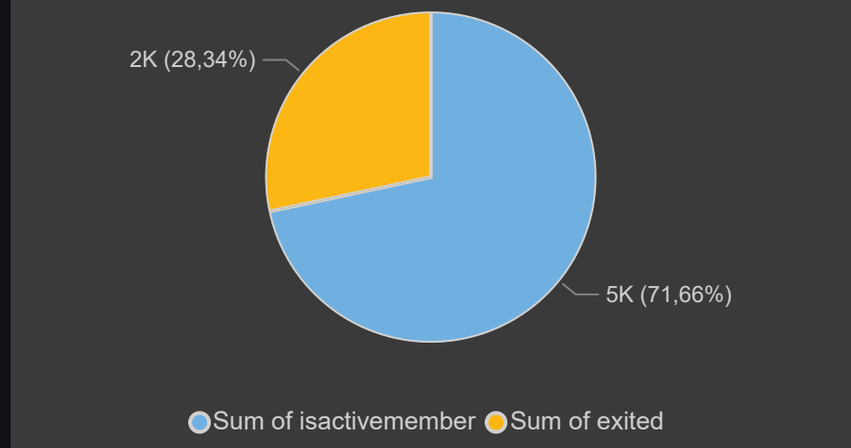
Active Member vs Churn



Executive Summary

Key drivers of customer attrition and recommended retention strategies

🛍️ **1-Product Customers Drive Most Churn**
Customers with only one banking product represent the largest share of churn.

⚡ **Inactive Members Are High Risk**
Customer inactivity strongly correlates with higher churn probability.

🌍 **Germany Shows Highest Churn Volume**
Germany contributes the largest number of churned customers.

💳 **Lower Credit Scores Increase Churn Risk**
Financially vulnerable customers churn more frequently.

Key Drivers of Churn

1 🛍️ **Low Product Adoption**

2 ⚡ **Customer Inactivity**

3 🌍 **Regional Concentration**

4 💳 **Credit Risk**

5 💰 **Moderate Account Balances**

RETENTION STRATEGY

🛍️ **Promote Multi-Product Adoption**
Encourage customers to adopt multiple banking services.

📣 **Re-Engage Inactive Customers**
Launch engagement campaigns targeting inactive members.

🌍 **Target High-Risk Regions**
Focus retention initiatives in high-churn markets.

💳 **Support Financially Vulnerable Customers**
Provide flexible financial solutions and credit support.

□ **Strengthen Mid-Value Customer Relationships**
Develop loyalty programs and personalized advisory services.

FINAL INSIGHTS

🎯 Key Takeaway
Customer churn is primarily driven by **low engagement and limited product usage**.
Improving customer activity and expanding multi-product relationships represents the **largest opportunity to reduce churn.**
